

DATA CENTRES

We operate two data centre environments based at geographically dispersed locations in the North West of England.

Both sites offer a secure, resilient environment for hosting customer platforms through a combination of world-class utilities, connectivity, security, engineering services and protection against infiltration and power outage. These are highly controlled, restricted access environments offering the highest levels of security.

Sites are carefully constructed with uninterruptible power supplies and stand-by generation systems, cable management and air conditioning to ensure a resilient location for the storage of critical data.

KEY DATA CENTRE FEATURES INCLUDE:

- ▶ Dual fibre networks
- ▶ Remote mains control
- ▶ Specially designed individual 1/4, 1/2 and full 1000mm deep cabinet enclosures with separate doors, front and back
- ▶ Unique combination keys ensure maximum security
- ▶ Automated access control system for easy 24/7/365 access
- ▶ Perimeter security fencing, with 24 hour security guards CCTV, motion detection, network monitoring
- ▶ Dual 2Mw diesel generators and UPS ensure constant 100% mains availability
- ▶ Fully air conditioned through pressured under floor design, with true hot and cold corridors for maximum heat dissipation
- ▶ Fully protected from smoke and fire by an advanced VESDA™ fire system
- ▶ Dual hierarchical switch infrastructure with auto-fail over
- ▶ Full fail-over dual gigabit firewall
